Education

Master of Software Engineering | University of California, Irvine, Irvine Sep 2024 - Dec 2025

- GPA: 4.00/4.00
- Courses in academic record:
Web Programming, Network Programming, Neural Network Programming, Concurrent Programming, ..., etc.

Geosciences, Master of Science | National Taiwan University, Taipei, Taiwan Sep 2018 - Jan 2021

- GPA: 3.98/4.00 | Class Rank: 1/17

Geosciences, Bachelor of Science | National Taiwan University, Taipei, Taiwan Sep 2014 - Jun 2018

- GPA: 3.71/4.00 | Class Rank: 4/31 | President's Award for 3 semesters

Experience

Corp IT Intern | Viant Technology, Irvine, CA Jun 2025 - Dec 2025

- Integrated OpenAI APIs with the Cloud Access System to deploy a **GenAI-powered** assistant, guiding users through proper permission requests and reducing incorrectly filed support tickets by 30%.
- Set up a **CI/CD pipeline** with **GitHub Actions** and **Docker** for **GCP - Google Cloud Run** and **Cloud Load Balancing**, cutting deployment time from 40 to 5 minutes and ensuring environment consistency.
- Engineered a data validation pipeline using **BigQuery** and **Cloud Run Job** to filter invalid domains from 1.5B email records, reducing ineffective ad placements by 90%.
- Developed a data pipeline using **Terraform** to provision **Cloud Scheduler** and **Cloud Run Job**, which processed CSV data to update an **AI Agent's** domain records and saved the operation team 30 hours per month.

Senior Software Engineer | Wistron Corporation, Taipei, Taiwan Feb 2021 - Jul 2024

- Built a bug search engine using **Django** (**Python-based** web framework) and **BERT** (Bidirectional Encoder Representations from Transformers), reducing search time by 16 hours per month for a team of 10 engineers.
- Architected a self-service test automation platform using **Laravel** to trigger **Jenkins** jobs, which simplified test plan execution for engineers and saved the company \$80,000 annually.
- Processed 45GB of data using **SQL** and **Supervisord**, implementing information retrieval systems to deliver real-time insights to managers and improving production decision-making.
- Leveraged **OAuth2** with **Microsoft Azure** to connect legacy systems, enabling **Single Sign-On** for over 300 employees and simplifying the user login experience.

Software Projects

Webmail System | Web Programming | University of California, Irvine Sep 2024 - Dec 2024

- Integrated real-time push notifications on the client side using **React.js** and **Redux**, allowing users to see their updated profile picture instantly, increasing user engagement and responsiveness.
- Designed and implemented **RESTful** APIs using **Node.js** and **Express.js** to manage user information, email operations (retrieval, sending, and deletion), and support real-time communication between the client and server.

Network File Server | Network Programming | University of California, Irvine Sep 2024 - Dec 2024

- Developed a network file server for text file transmission over both **TCP** and a custom-built reliable **UDP** protocol, implementing logic for file chunking and retransmission to handle datagram size limits.
- Utilized **Java's** **threading** model for managing multiple clients.

Skills & Abilities

Programming languages: Python, Go, Java, TypeScript, PHP, JavaScript, C++
Frameworks: Django, Laravel, NestJS, Node.js, Express.js, React.js, Spring Boot, Flask
Developer Tools: Linux, Docker, Git, Nginx, BERT, Supervisord, MySQL, PostgreSQL, Oracle, AWS, GCP, MongoDB, Prisma, Redis, Jenkins, Azure, Airflow, Kafka, Swagger, Cloudflare

Certifications

AWS Certified Cloud Practitioner Jan 2025 - Jan 2028
